

Educational establishments have two unique problems in looking after their learning & support infrastructure. Firstly assets are difficult to safeguard and are often dispersed across a variety of locations and users.

Secondly the Local Education Authority has legal requirements for how schools manage and track their assets. Asset Intelligence ensures that you can maintain control of both inventory and capital assets, through identifying and tracking assets accurately and effectively.

Work the way you want to

Our easy-to-use module may be used to provide total control over assets and/or inventory items. The following are examples of how it can be implemented:

- **Asset tracking:** Assets can be identified, located and controlled according to the financial & physical requirements of any school. **Even door keys to rooms and buildings can be controlled!**
- **Bar Coding.** Provides an efficient, accurate and flexible way to identify, audit, create and track assets. Keep on top of all your assets movements quickly and accurately.
- **Maintenance / Fault management:** Provides a complete system for scheduling, recording and analysing routine and breakdown maintenance work, photocopier usage etc.
- **Software Licence Compliance:** Use Acatrack to better manage the school's software installations and licenses in order to avoid over-expenditure or under-licensing by tracking all software applications.
- **PAT testing** or portable appliance testing is an important part of any school's health & safety policy. Acatrack will keep it up to date.
- **Asset Allocation:** Staff or students can borrow / move assets and record the transaction in order to keep track of the assets movements.

The people to back up the promise

To back up this solution we provide support services to help you every step of the way. All in all, Asset Intelligence will save hours of staff time, which can be spent more cost effectively elsewhere.

Asset Intelligence is more than just another piece of software. It's a totally comprehensive solution, backed up by people with the experience and qualifications to understand the dynamics of asset management at every stage of the lifecycle.

As the company behind Asset Intelligence, FMIS has been leading the way in asset management since 1986. We have provided software and consultancy to various educational establishments and many household names and are a Business Development Partner of IBM.

Whilst having a wealth of experience, we also have a youthful attitude of innovation and creativity. This helps us retain a genuine enthusiasm for the task of identifying an organisation's needs and providing a solution to match. In fact, there's nothing more certain to bring out the best in us than a problem that needs cracking.

Asset Intelligence School Asset Tracker is an intelligent solution that offers all you need to control the school or college's assets, usage, location, maintenance and replacement.

- **Simple** to use, modular software that runs on virtually any hardware platform
- **Fulfil** the local authorities' requirements for asset management.
- **Compatible** with the best known accounting, ERP and network discovery systems
- **Powerful** search facilities, ensuring accurate management information is always available
- **Flexible** enough to be able to reflect your organisation and its processes
- **Future-proof** software architecture to ensure leading edge functionality
- **Cost-effective** solution which improves the productive use of assets and return on capital investment
- **Coordinated** asset management system that benefits your whole organisation; purchasing, finance, IT, facilities and all departments using equipment of any sort.

Asset Intelligence has become the asset management solution of choice for hundreds of organisations in over 40 countries.

What do our clients think?

South Kent College said:

"FMIS software has given us the opportunity to account properly for our assets for the first time! The customer service is excellent, the staff helpful & friendly & the software is user-friendly."

St Thomas More School said:

"Having invested in new equipment recently, the FMIS software & audit services have enabled us to establish an accurate inventory of items to be tracked for insurance & management purposes. Departments such as IT, facilities, CDT, AVA, PE, music, media and finance will all benefit. It will help our school run smoothly and cost effectively and ensure that we are making best use of our capital investment."

Bentalls said:

"The implementation of FMIS' software has been a considerable step forward in terms of satisfying internal and external audit requirements and providing essential information for management decision making."
